# Glimpse

A communication device for Visually Impaired athletes that enables them to determine their own path

---

Giulio Ammendola, Naomi Bailey-Cooper, Sungwhoon Cho, Antton Pena

---

Visually impaired skiers race with a sighted guide who travels a few meters ahead of them. They rely on verbal communication and have no means of independently gauging where objects are around them. **Glimpse** gives independence to Paralympic skiers and snowboarders by providing relative position awareness via multi-sensorial feedback, mixing biomimicry and new technology. **Glimpse** presents opportunities for new sports by creating a safe environment for multiple athletes competing on the same track. Our ambition is to enhance the experience for both the athletes and the public.
